LECTURE 21 BST AND TREE TRAVERSALS

MCS 275 Spring 2022 Emily Dumas

LECTURE 21: BST AND TREE TRAVERSALS

Course bulletins:

- Worksheet 8 available.
- Project 2 grading underway.
- I know project 2 proved to be challenging for many students.
- Project 3 will be posted this week, is due Friday 18 March.

UPDATE BST CLASS

Let's make it so that BST() is considered a valid, empty tree.

TREEUTIL

I added a module to the trees sample code folder which can generate random trees. You'll use it in lab this week.

Documentation of treeutil module

INTEGERSET

- As a sample application of BST, we can make a class that stores a set of integers, supporting membership testing and adding new elements.
- Compare alternatives:
- Unsorted list fast to insert, but slow membership test
- Sorted list fast membership test, slow insert

IMPLEMENTATION HIDING

To use BST, you need to know about and work with Node objects.

In contrast, IntegerSet has an interface based directly on the values to be stored. It hides the fact that its implementation uses a BST.

WALKING A TREE

Back to discussing binary trees (not necessarily BST).

For some purposes we need to visit every node in a tree and perform some action on them.

To do this is to **traverse** or **walk** the tree.

NAMED TRAVERSALS

The three most-often used recursive traversals:

- preorder Node, left subtree, then right subtree.
- postorder Left subtree, right subtree, then node.
- inorder Left subtree, node, then right subtree.

Note: They all visit left child before right child.

Typical use: Make a copy of the tree.

Insert the keys into an empty BST in this order to recreate the original tree.

16, 8, 4, 15, 87, 42, 23, 91

- Typical use: Delete the tree.
- If you delete keys in postorder, then you will only ever be removing nodes without children.

4, 15, 8, 23, 42, 91, 87, 16

Typical use: Turn a BST into a sorted list of keys.

REFERENCES

- In optional course texts:
 - Problem Solving with Algorithms and Data Structures using Python by Miller and Ranum, discusses binary trees in Chapter 7.
- Elsewhere:
 - Cormen, Leiserson, Rivest, and Stein discusses graph theory and trees in Appendices B.4 and B.5, and binary search trees in Chapter 12.
